Interface pad for POL 50-55-80 - 120mm - M14

POL 56

- Interface pad for POL 50-55-80
- 120mm - M14
- Included when polisher is purchased.
- Universal, fits on almost all electric polishing machines. This polishing pad is unique because of its flexibility: when polishing flat, you use the entire surface of the polishing pad just like other polishing pads (diameter 145mm). But with this pad you can also easily polish over edges and even polish at an angle which makes it possible to put locally and temporarily more pressure on the surface while the polishing pad itself stays flat.
- Use with POP 114-314-514-714-914
