

Sanding disc Ø 150mm - 15 holes

SPDA

Sanding paper

Based on our experience in the professional body shop and in cooperation with several paint manufacturers, we developed a complete program of abrasives adapted to the latest technology in car refinishing.

With the introduction of environmentally friendly paints, high-solid products, UV primers and clear coats, water based paints, anti-scratch coatings, self-repairing clear coats, anti-chip clear coats, ... into the automotive refinish, 21st century abrasives requirements have evolved substantially. Therefore, with abrasives, one does not only get a complete program in different shapes to be used by hand or with a sander, but a cost effective product that is fast, sharp and long-lasting on any modern application.

The technology is the result of years of trial and error combined with the feedback of paint manufacturers. Where in the past an abrasive was a question of getting a grid glued to a paper laminated with Velcro, today's abrasives are:

- Double glued layer of the grit avoiding detachment of the grit.
- Blue fired aluminium oxide grit partly enriched with diamond based powder, increasing the durability.
- Uniformed orientation of the grit on the backing, insuring the sharpest point of the grit is making contact with the surface increasing the sharpness and speed during sanding.
- Stearate hot melted coating avoiding clogging of dust particles into the abrasive making the paper long lasting.

RED:

- Paper disc
- Faster
- Longer
- Without clogging
- Old paints & new paints
- High solid primers & clear coats & polyester putties
