

THIS CERTIFICATE IS PROUDLY PRESENTED TO

# *Chemical Europe nv.*

This certificate is awarded to **Chemical Europe NV** in recognition of their commitment to sustainability through the integration of recycled materials into their product range.

**Chemical Europe NV's** primary focus is to integrate recycled materials into their product line as much as possible. Although achieving full sustainability for all products remains a challenging goal, their dedicated efforts are focused on getting as close to this goal as possible. Recognizing the intrinsic link between sustainable and disposable plastics, both of which stem from the common basis of "plastic,"

**Chemical Europe NV** has deliberately chosen high-quality, sustainable plastics.

These materials integrate harmoniously into the circular economy and contribute to a more sustainable future.

This unwavering commitment ensures that part of their product range is designed to have a second life through environmentally friendly recycling processes, achieved by working with reliable partners. Their goal is to approach and exceed the sustainability benchmark of the European standard.

By using regranulate for their mixing pads (GAC 0250-1000), **Chemical Europe NV** demonstrates their commitment to closing the recycling loop. Regranulate, a 100% recycled plastic, is derived from various high-quality polypropylene materials, including "textile bobbins, pallets, big bags and yarns." The strictest quality standards are applied in the production of regranulate, with every impurity carefully removed during the cleaning process.

The result is a product of exceptional material purity and unwavering quality.

**Chemical Europe NV** has embraced the values of sustainability, environmental responsibility and circular economy, setting a commendable example for others to follow.
