

TDS TECHNICAL DATA SHEET

TECHNICAL DATA SHEET IAG 20 - Finixa instant adhesive gel - 20gr

PRODUCT DESCRIPTION

Technology	Cyanoacrylate
Chemical Type	Ethyl cyanoacrylate
Appearance (uncured)	Transparent clear liquid
Components	One part - requires no mixing
Viscosity	High
Cure	Humidity
Application	Bonding
Key Substrates	Plastics, Rubbers and Metals

TYPICAL PROPERTIES OF UNCURED MATERIAL

Specific Gravity @ 25 °C1.05Viscosity, Cone & Plate, mPa·s (cP):900 to 1,500LMSTemperature: 25 °C, Shear Rate: 100 s-1900 to 1,500LMSViscosity, Brookfield - LVF, 25 °C, mPa·s (cP):1,150 to 1,500Spindle 2, speed 12 rpm1,150 to 1,500Vapour Pressure, hPa<1</td>Flash Point - See SDS1

TYPICAL CURING PERFORMANCE

Under normal conditions, the atmospheric moisture initiates the curing process. Although full functional strength is developed in a relatively short time, curing continues for at least 24 hours before full chemical/solvent resistance is developed.

Cure Speed vs. Substrate

The rate of cure will depend on the substrate used. The table below shows the fixture time achieved on different materials at 22 °C / 50 % relative humidity. This is defined as the time to develop a shear strength of 0.1 N/mm

Fixture Time, seconds:	
Mild Steel (degreased)	20 to 50
Aluminum	10 to 30
Zinc dichromate	40 to 100
Neoprene	<5
Rubber, nitrile	<5
ABS	15 to 40
PVC	20 to 50
Polycarbonate	30 to 70
Phenolic	10 to 40

Chemicar Europe nv Baarbeek 2 2070 Zwijndrecht België-Belgium

Cure Speed vs. Bond Gap

The rate of cure will depend on the bondline gap. Thin bond lines result in high cure speeds, increasing the bond gap will decrease the rate of cure.

Cure Speed vs. Humidity

The rate of cure will depend on the ambient relative humidity.

The following graph shows the tensile strength developed with time on Buna N rubber at different levels of humidity.

Cure Speed vs. Activator

Where cure speed is unacceptably long due to large gaps, applying activator to the surface will improve cure speed. However, this can reduce ultimate strength of the bond and therefore testing is recommended to confirm effect.

TYPICAL PROPERTIES OF CURED MATERIAL

After 24 hours @ 22 °C	
Physical Properties:	
Coefficient of Thermal Expansion,	100×10 ⁻⁶
ISO 11359-2, K ⁻¹	
Coefficient of Thermal Conductivity, ISO 8302,	0.1
W/(m·K)	
Softening Point, DIN EN 1427, °C	165

Electrical Properties:

Dielectric Constant / Dissipation Factor, IEC 60)250:
0.1-kHz	2 to 3.3 / <0.02
1-kHz	2 to 3.5 / <0.02
10-kHz	2 to 3.5 / <0.02
Volume Resistivity, IEC 60093, Ω·cm	2×10^{15} to 10×10^{15}
Surface Resistivity, IEC 60093, Ω	10×10^{15} to 80×10^{15}
Dielectric Breakdown Strength,	25
IEC 60243-1, kV/mm

1,1,1 Trichloroethane	22	100	100	100
Heat/humidity 95% RH	40	80	75	65
Heat/humidity 95% RH	40	100	100	100
on polycarbonate				

GENERAL INFORMATION

This product is not recommended for use in pure oxygen and/or oxygen rich systems and should not be selected as a sealant for chlorine or other strong oxidizing materials

For safe handling information on this product, consult the Safety Data Sheet (SDS).

Directions for use:

- 1. For best performance bond surfaces should be clean and free from grease.
- 2. This product performs best in thin bond gaps (0.05 mm).
- 3. Excess adhesive can be dissolved with cleanup solvents, nitromethane or acetone.

Storage

Store product in the unopened container in a dry location. Storage information may be indicated on the product container labeling.

Optimal Storage: 2 °C to 8 °C. Storage below 2 °C or greater than 8 °C can adversely affect product properties.

Material removed from containers may be contaminated during use. Do not return product to the original container.
