SHARPWHITE SANDING DISC Ø75MM - MULTIHOLE

SFDD 0080-0800

SharpWhite is made of a new type of ceramic aluminium oxide with a high initial cutting power for efficient sanding. Because of its high cutting speed, this premium abrasive saves significantly on labour! The white, anti-clogging coating makes sure the abrasive is durable and the multi-hole feature guarantees a dust free environment.

SharpWhite sands up to 20% faster than the average sanding disc. Using SharpWhite significantly reduces labour costs and allows technicians to do more repairs. More repairs lead to more revenue and a greater use of invested equipment and spray booth, allowing a faster return on investment.

- Fast, accurate, dust-free sanding
- Developed for **spot and smart repair**
- Perfect for sanding **hard to reach areas**
- A must-have for **bumper and wheel repair**
- **Quick & easy disc change**
- For 75mm dual action sanders
- **High initial cutting power**; the self-sharpening grains are broken out of the granulate by the sanding forces, creating new and sharp grain tips
- **Longer disc life**; white, anti-clogging coating that helps keep the disc from loading up during sanding
- **Excellent dust extraction** ; 29 holes
- Adapted to the latest paint systems; works perfectly on air-drying primers, scratch-resistant clearcoats and UV cured paints
- **Ultra flat film backing** results in a consistent scratch pattern
